

# SPINWORX®

Time-saving tooling system for low-manpower  
operation with self-rotating inserts

# Patented innovations developed to set new standards in terms of economic tool life optimisation.

In order to simplify your tasks, our employees work on new innovations on a daily basis. With a look ahead, we repeatedly put all the products to the test to make them even more efficient.

The **SPINWORX®** tool system enqueues here perfectly. It completely redefines working with the round inserts. Via self-rotating inserts and the subsequent even abrasion, we achieve tool life that has no rival. Whereas with standard round plate milling cutters, the manufacturing process is interrupted by permanent manual spinning.

Spinworx® Patent Publication

Both innovative and easy, the Spinworx® with its self-rotating inserts sets new standards in terms of tool life.

# The unique time-saving tooling system with self-rotating inserts

**SPINWORX®** – the innovative tooling system puts into question what has been an effective operation for decades: the insert has to be „rigidly“ coupled to the cutter body – if it were „loose“ in its insert seat it would break sooner or later! This is not the case with **SPINWORX®** – the insert rotates, thus making manual re-positioning superfluous. At the same time 100% utilization of the entire cutting edge is achieved without loss. **SPINWORX®** sets new standards – you reduce your downtime and non-productive times to zero, leaving competitors

behind. By using our **SPINWORX®** system, you can machine your components more efficiently and optimise your machine availability at the same time.

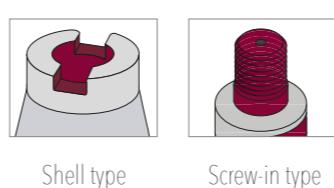

**SPINWORX®** tools are ideal for roughing and residual material machining during the face milling, slot, peripheral and pocket milling of materials such as steel, cast iron, stainless steel and heat resistant superalloys.

## SPINWORX® Features

- 100% use of the total cutting edge
- Minimised set-up times since no manual indexing of the inserts is necessary
- Chip volume is much higher without interruption in the production process\*
- Suitable for machining steel, cast iron, stainless steel and heat resistant superalloys
- Ideal for roughing and residual material machining during face milling, slot, peripheral and pocket milling
- Low power consumption of the machine spindle due to chip forming

\* depending on milling conditions

## Optimized outer contour

The geometry of the SPINWORX® tools enables optimum chip removal, particularly during the machining of pockets and slots. In addition, the rounded outer contour effectively prevents chips sticking to the tool.

## The material - the decisive basic factor

SPINWORX® cutter bodies are made of a high-quality basic material to cope with the extremely high running time with one insert set.

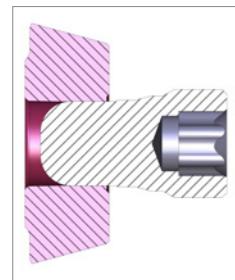

## Insert seat:

Due to the large transition radius of the insert seats in the bodies, an excessive notch effect is produced. A further advantage is that it cannot break the tooth root due to overload.

## THE SELF-ROTATING INSERT

A crucial component in the SPINWORX® tooling system are the self-rotating inserts, which have been optimally matched to the milling cutter seats of course. And there are special design features here which make safe and long-term function possible here as well. For a wide

The pin/insert combination

The cylindrical surface of the inserts hole has a precisely defined proportion of contact area. The cylindrical part of the pin, which provides additional support in the seat of the tool, is exactly matched to this.

The race

All SPINWORX® inserts are equipped with a race. This protects the inserts from a non-constant rotation and supports the characteristics of the embedded insert seat.

## Order number key

Tool:	
Tool type	DR10-025-E12-03
Insert size Ø mm [d]	
Nominal diameter Ø mm [d1]	
Type of connection E - Threaded shank end mill body A - Shell-type milling cutter body	
Connection size Ø mm [d2]	
No. of teeth	

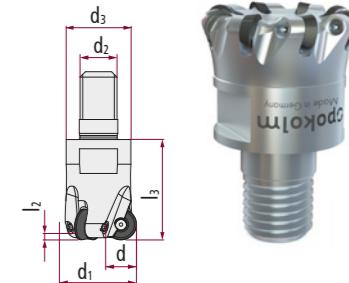

Insert:	
Tool type	DR10-8C4
Insert size Ø mm [d]	
Identification feature	
Carbide and coating code	
B M35 Stainless steel / high-temperature alloys	
C K10 Steel / Cast iron / Hardened steel < 60 HRC	
E P25 Steel / Cast iron	
F P40 Steel / Cast iron	
Geometry	
3 Ground with chip-breaker groove, clearance angle 11°	
4 Sintered without chip-breaker groove, clearance angle 15°	
7 Ground with chip-breaker groove, clearance angle 15°	

## SPINWORX®

r3.5 - diam. 16 - 35 mm

The highly productive SPINWORX system in its smallest version

- unsurpassed in term of cutting volume and tool life
- wide range of use for almost all areas of application
- effective use of cutting edge
- can replace solid carbide endmills in some applications
- with specially adapted coolant supply

## SPINWORX® DR12 in field testing

Processing task in 1.7225 (42CrMo4) „Roughing in mechanical engineering“

Milling cutter body:	DR12-052-A22-06
D <sub>c</sub> (nominal diameter):	52 mm
Arbor:	250 22 710
Overhang:	approx. 302 mm
Cooling:	IKZ
Indexable insert:	DR12-8F4
V <sub>c</sub> (speed):	200 m/min
n (revolutions):	1224 min-1
F <sub>z</sub> (feed per tooth):	0,8 mm
V <sub>f</sub> (feed rate):	5876 mm/min
A <sub>p</sub> (depth of cut):	1 mm
A <sub>e</sub> (width of cut):	37 mm
Tool life:	3 h
End of tool life:	reached
Cutting volume:	217,43 cm <sup>3</sup> /min

## SPINWORX® DR12 in field testing

Processing task in 1.4848 (GX40CrNiSi25-20) „Roughing in mechanical engineering“

Milling cutter body:	DR12-066-A27-07
D <sub>c</sub> (nominal diameter):	66 mm
Arbor:	50 27 710
Overhang:	approx. 102 mm
Cooling:	Air
Indexable insert:	DR12-8F4
V <sub>c</sub> (speed):	120 m/min
n (revolutions):	579 min-1
F <sub>z</sub> (feed per tooth):	0,5 mm
V <sub>f</sub> (feed rate):	2026 mm/min
A <sub>p</sub> (depth of cut):	0,8 mm
A <sub>e</sub> (width of cut):	31 mm
Tool life:	1 h
End of tool life:	reached
Cutting volume:	50,24 cm <sup>3</sup> /min

Systemdarstellung

Processing task in Inconel 718 „Roughing in mold making“

Milling cutter body:	DR12-032-E16-04
D <sub>c</sub> (nominal diameter):	32 mm
Arbor:	50 16 710
Overhang:	approx. 85 mm
Cooling:	Air
Indexable insert:	DR12-8B7
V <sub>c</sub> (speed):	45 m/min
n (revolutions):	448 min-1
F <sub>z</sub> (feed per tooth):	0,2 mm
V <sub>f</sub> (feed rate):	358 mm/min
A <sub>p</sub> (depth of cut):	1 mm
A <sub>e</sub> (width of cut):	16 mm
Tool life:	3,6 h
End of tool life:	reached
Cutting volume:	5,73 cm <sup>3</sup> /min

Systemdarstellung

## SPINWORX® DR12 in field testing

Processing task in Ti6Al4V (Titan Grad 5) „Roughing in tool and mold making“

Milling cutter body:	DR12-050-A22-07
D <sub>c</sub> (nominal diameter):	50 mm
Arbor:	50 22 750
Overhang:	approx. 100 mm
Cooling:	Emulsion
Indexable insert:	DR12-8B7
V <sub>c</sub> (speed):	50 m/min
n (revolutions):	318 min-1
F <sub>z</sub> (feed per tooth):	0,19 mm
V <sub>f</sub> (feed rate):	423 mm/min
A <sub>p</sub> (depth of cut):	2 mm
A <sub>e</sub> (width of cut):	35 mm
Tool life:	10 h
End of tool life:	reached
Cutting volume:	29,63 cm <sup>3</sup> /min

Systemdarstellung

Processing task in 1.8550 Stellite 12 (52 HRC) „Roughing in mechanical engineering, extruder shafts“

Milling cutter body:	DR12-066-A27-09
D <sub>c</sub> (nominal diameter):	66 mm
Arbor:	50 27 A100
Overhang:	approx. 102 mm
Cooling:	Air
Indexable insert:	DR12-8C4
V <sub>c</sub> (speed):	125 m/min
n (revolutions):	603 min-1
F <sub>z</sub> (feed per tooth):	0,4 mm
V <sub>f</sub> (feed rate):	2170 mm/min
A <sub>p</sub> (depth of cut):	0,8 mm
A <sub>e</sub> (width of cut):	66 mm
Tool life:	4 h
End of tool life:	not reached
Cutting volume:	114,59 cm <sup>3</sup> /min

# ASSEMBLING INSTRUCTIONS

## Fitting of SPINWORX® inserts in the tool

In order to maintain optimum and safe use of these tools, you should pay attention to following notice:

### Step 1: placing inserts into the seat

Place the inserts (1) into the seat provided. Apply the paste included (4) to the thread of the pin (2) and make sure no paste (catalogue number „Z 00043“) gets onto the contact surface.

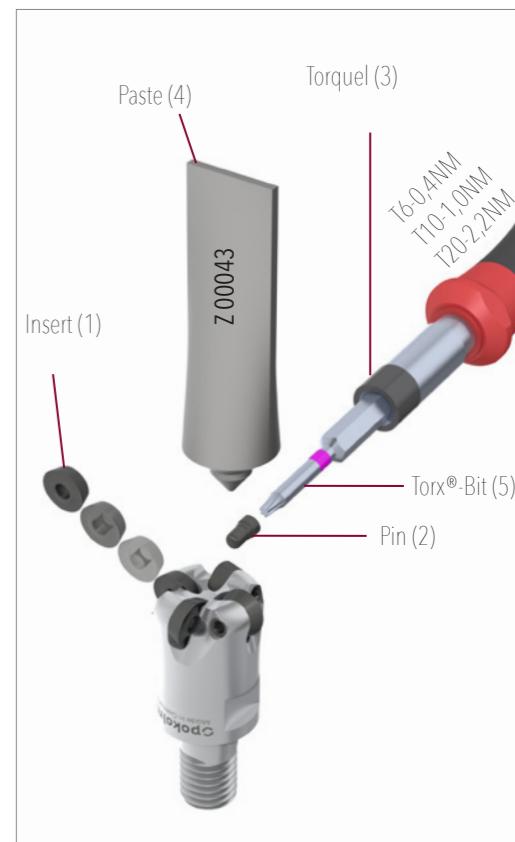

Remove any surplus before using the tool.

### Step 2: inserting the pin

Insert the pin (2) into the screw hole from the back side and use the torque key to tighten according to the specified tightening torque. We recommend using our pre-set torque key with.

### Tightening torques

Insert	Torx® size	Tightening torque
DR07-8	T6	0,4 Nm
DR10-8 DR12-8	T10	1,0 Nm
DR16-8 DR20-8	T20	2,2 Nm

### CAUTION! Please note!

#### SIMPLE HANDLING THANKS TO CONVENIENT TOOL

We recommend our torque keys with pre-set tightening torque as a convenient and safe alternative to conventional Torx or torque keys.

For optimum results with the SPINWORX®-tooling system we recommend using internal coolant supply air, emulsion or MMS for chip removal in the tool!
